## 任务和解决方案

## Task and Solution

### 任务

重工业对所用部件的可靠性和寿命提出了很高的要求。经验表明，仍在许多工厂用于位置监测的机械凸轮限位开关不能满足安全性、准确性和易用性的这些要求。

例如，这些机械设备往往表现出低切断精度和用户不友好的处理期间调整切断点。这种低效率破坏了顺利的工业过程，由于需要额外的时间和精力来实现精确定位，导致停工和更长的停机时间。

### Task

Heavy industry places tough demands on the reliability and lifetime of the installed components. Experience shows that mechanical cam limit switches, which are still used in many industrial plants for position monitoring do not meet all requirements in regards to safety, accuracy and ease of use.

For example, these mechanical devices often exhibit low switching accuracy and user-unfriendly handling during the adjustment of switching points. This inefficiency disrupts the smooth industrial process, causing stoppages and longer downtimes due to the extra time and effort required to achieve precise positioning.

ERC 40 具有法兰结构形式 (B5)、法兰和底脚结构形式 (B35).
